Club **Stitching Club**

During the stitching process, a critical discrepancy occurred when 4.5 cm paper templates were mistakenly converted to 4.5 inches during fabric cutting due to standard industry habits. This dimensional error was discovered when the cut pieces failed to fit the target design model, prompting a collaborative review of the templates and layout metrics. The team resolved the issue by creating precise new templates, recutting the fabric to 4.5 cm, and completing the assembly.

Always cross-check the unit before cutting. The templates were 4.5 cm; read as 4.5 inches, a whole batch of fabric was cut to the wrong size and had to be recut.
